Ovarian Cancer. Urgent call for action

Forty years ago following the introduction of chemotherapy, the **five-year survival rate** for women diagnosed with ovarian cancer was 36%. In 2014 it is 43%. The lack of any real progress in fighting this insidious disease confirms that current therapeutic approaches are not effective in preventing tumor recurrence. [Read more...](#)

Cantrixil - could this be the long-awaited breakthrough treatment for ovarian cancer? We think so.

Cantrixil has the potential to change the treatment landscape for ovarian cancer. The active ingredient of Cantrixil, **TRXE-002**, is a highly effective killer of both cancer stem cells and regular (daughter) cancer cells in ovarian cancer. The secret behind the development of **TRXE-002** is the discovery of a molecular target that is common to both parent and daughter cancer cells. Disabling this target triggers the cancer cell's self-destruct button. [Read more...](#)

Establishment of Medical Oncology Advisory Panel

Novogen has previously announced the appointment of Professor Paul De Souza as Chair of our Glioblastoma Medical Advisory Committee. Professor de Souza has agreed to take a more expansive role by providing advice on company-wide clinical oncology strategy and now will chair the Novogen Medical Oncology Advisory Panel. He has been joined by medical oncologists Professor Howard Gurney and Associate Professor Gavin Marx.

Anisina - a means to make current chemotherapy more effective and safer

Australian university medical researcher, Professor Peter Gunning, once dreamt of finding a better and safer way to treat childhood cancers ... to be able to use cytotoxic drugs that killed cancer cells that didn't leave the child with a lifetime legacy of a damaged body. The anti-tropomyosin (ATM) drug technology was the result of that dream, and **Anisina** is the culmination of the search to bring that technology into the clinic. [Read more](#)

TRXE-009 - bridging the link between brain cancer and melanoma

The Company recently announced the discovery that **TRXE-009** displayed particularly high activity against melanoma cells, to add to its high potency against brain cancer cells. In so doing, a remarkable story unfolded. [Read more.....](#)

Project Jacob Hope - an exciting new frontier to conquer

Project Jacob Hope is a broad-ranging R&D program that is exploring the use of the Novogen super-benzopyran drug technology platform to develop effective treatments for a wide range of degenerative diseases where no treatments currently exist. Here we look at just one of these diseases in our sights – Sanfilippo Syndrome. [Read more...](#)
